For rent

The Bielsko Aviation Technology Park was created as an response to the needs of the aviation industry and modern branches of our country's economy. These needs are consequences of the fact that we are behind Europe in this field of economy. The favour-able localization, on the crossroads of Europe's communication routes, the relatively weak web of aviation infrastructure in our country, and most of all, the increasingly growing interest in civil aviation are causes for which aviation manufacturers, dealers and service companies take advantage of every opportunity for professional support.

Technical specification: Park offers four warehouses and production premises to rent, 2500sqm each, heating instalations, clear height 5m, fire hydrants, smoke detectors, manueuvring area, every hangar hall has its own separate living area with restrooms and shower facilities
